

# Winn Item Tracking System

Winn Solutions has over a decade of experience in the software tracking industry combined with today's leading edge technology, Microsoft's .NET Framework, we have created the first hosted, web-based tracking system: WebWITS. Web-based products are thriving. Their proven Return-on-Investment (ROI) and lower Total Cost of Ownership (TOC) than traditional client/server based counterparts cannot be disputed. Web-based applications require only a web browser, security, and access to the web site, (Intranet or Internet) for a user to connect and use the product. Web-based products do not require additional client/server companion products to purchase, set up or maintain.

## Benefits of Web Technology

- Easy to Install
- No Driver Conflict
- Lower Database Licensing Costs
- Easier On-going Maintenance
- Reduced Training Costs
- Minimizes Network Traffic

## SAAS (Software as a Service)

- No Up front licensing costs
- Free trial period
- Training via WebEx (reduced training costs)
- No long term lease
- Annual Maintenance fee
- Automatic software updates to all stations
- Support and training included in annual fee
- Pricing based on # of hosted work stations and hardware
- Connectivity (nation wide or world wide)
- Flexible work flow
- Custom report writer
- 508 compliant

**Web WITS** allows each customer the ability to tailor the system themselves; creating the best business practices for their unique organization.

- Hospitals – asset tracking, records management
- Insurance companies – assets tracking, accountable mail & packages, records management
- Law Enforcement – asset tracking, evidence, records management
- Law Firms – accountable mail & packages, asset tracking, fax tracking, inter-branch transfers, records management
- Financial Institutions – asset tracking, accountable mail & packages (Cheques, letters of credit, money transfers, contracts, financial filing documents)
- Government Entities – asset tracking, accountable mail & packages, courier drivers (GPS coordinates) equipment checked in and out to individuals

With the ability to track parcels and documents internally through a system that uses signature and regular data downloading and reporting, the trickle of lost costs, both hard and soft, begins to reverse. Now with Web-based technology versus Web-enabled it is possible to link multiple sites either nation wide or worldwide. Web-enabled applications have limited life in the market. More robust web-based products are replacing them. Product replacement is always an issue with end users because the new version will have a different look and feel along with a new set of functions. When you upgrade you will have to obtain more training and deal with the disruption of a new system all over again. This problem can be completely avoided by going to our web-based product immediately. In addition to this new technology we found an unrivaled bonus; we are able to offer more functionality, create a more user-friendly environment and charge less for our services. Customers may host their data or we can provide a very cost effective hosted model.
